

LUNASTONETM

Would like to congratulate you on the purchase of the:

DYNAMIC DELAY

The LunaStone Dynamic Delay is designed to serve your creativity in every best possible manner! Utilizing a soft and warm analog mix circuit, combined with a high resolution digital processor, it fetches the best of the two worlds. The special Dynamic feature, lets you dial in compression of the delay, with just one knob! This makes the delay effect, so to speak, "cross-fade" with your playing, blending perfectly into any kind of music, even through non-diatonic chords progressions, and varying tempos. The Dynamic Delay also features: Tap Tempo, Two Bypass Modes: 'True Bypass', or 'Buffered Bypass with spill-over', which will let the delay ring out when bypassing the effect.
